

AQUA-PLUG

THE VERY FAST SETTING
LEAK STOPPING CEMENT
 Stops Running Water Leaks
 Prevents Water Seepage Through Masonry

AQUA-PLUG, leak stopping cement, is a fast setting hydraulic compound used for filling holes, cracks or leaks in masonry floors and walls. AQUA-PLUG sets under water and is the ideal cement for stopping water infiltration.

**SEALS ALL TYPES OF
 MASONRY LEAKS
 KEEPS BASEMENTS DRY**

**SETS UNDER WATER
 USE TO PATCH
 SWIMMING POOLS**

Item#	Size
30-6520	12 - 3 LB. CONTAINERS
30-6530	4 - 10 LB. CONTAINERS
30-6550	1 - 50 LB. CONTAINER

DIRECTIONS

To fill cracks or holes in concrete:

1. Area to be patched must be clean and free of any loose material. Deepen cracks for more secure anchoring.
2. Mix product to a putty like consistency. AQUA-PLUG sets in 3-5 minutes, so mix only enough for immediate use.
3. Force product into crack or hole using putty knife or trowel. Hold in place for a few minutes until AQUA-PLUG has set.
4. For water running through walls: Start at top of crack and work your way down. Gradually reduce size of opening by pressing AQUA-PLUG firmly into crack and holding in place until set. Repeat procedure until crack is closed.

STORAGE: Store in a cool, dry place.
