RUST & STAIN REMOVER

- *Tubs* Toilet Bowls & Tanks* Clothing*
- *Dishes* Glassware* Water Softeners*
- *Washing Machines* Dish Washers*
- *Tile* Masonry* Stone and *more*

Solves Rust and Stain Problems
throughout the Home

- Iron in water makes drinking water taste and smell bad.
- Iron in water (as little as 0.3 parts per million) leaves rust stains and deposits on toilet bowls and tanks, tubs, sinks and laundry.
- Iron and rust reduce the softening and recharging efficiency of water softener resin and helps block water lines because it collects in water softeners, coating and filling the resin beads with rust.

EndRust solves these problems, and it's safe and easy to use. It changes rust (iron and iron oxide) into a form that easily flushes away. Use it in your water softener to eliminate the work of removing rust stains and deposits from sinks, toilet bowls, tubs, fabrics and other surfaces. If stains and deposits have already accumulated on these surfaces, use **EndRust** to remove them.

EndRust is a super-active, concentrated product made from the finest ingredients and unlike other products, it doesn't have a bad odor. It's minty fresh.

12-20 oz. containers
